Methodology: The Consumer Comfort Index (CCI) is produced by [Langer Research Associates](#). The CCI is reported in a four-week rolling average; this week's results are based on telephone interviews among a random national sample of 1,000 adults in the four weeks ending Jan. 16, 2011. The results have a 3-point error margin. The expectations question was asked of 500 respondents Jan. 5-16, 2011; that result has a 4.5-point error margin. Field work by ICR-International Communications Research of Media, Pa.

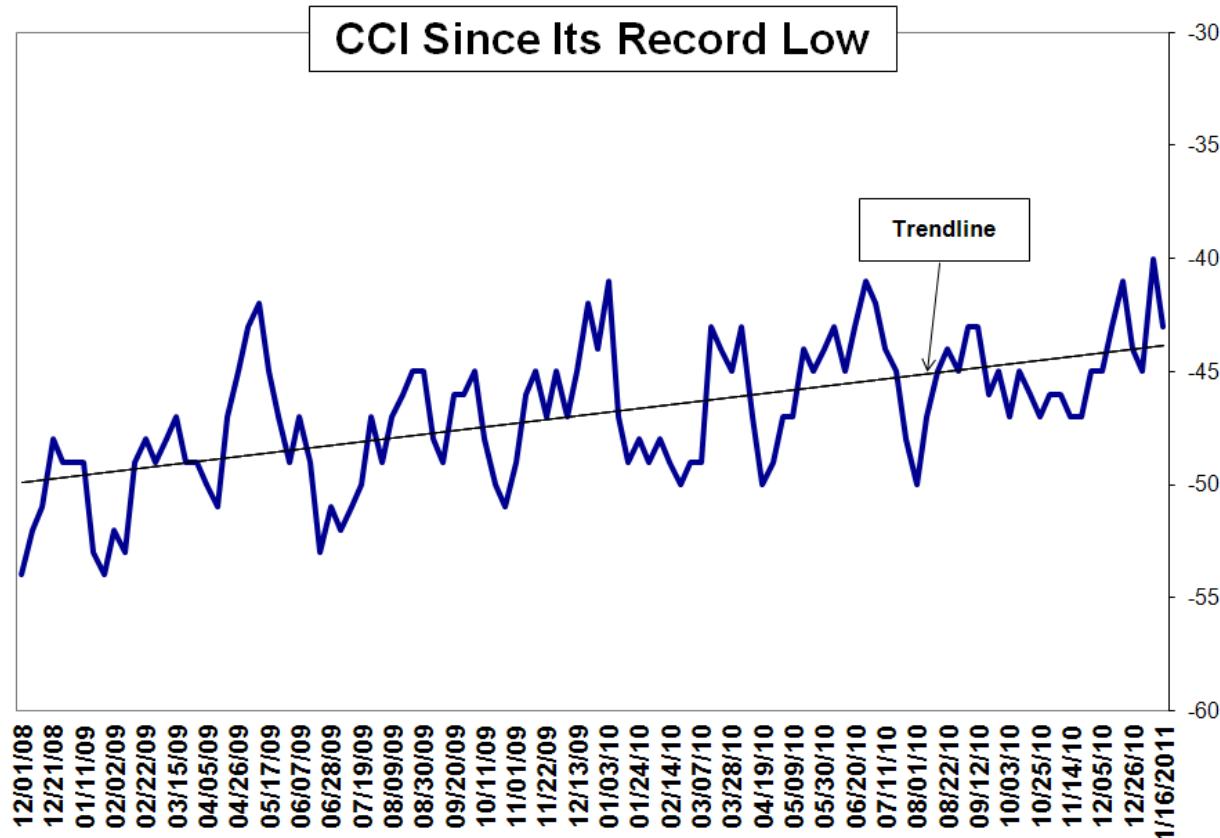

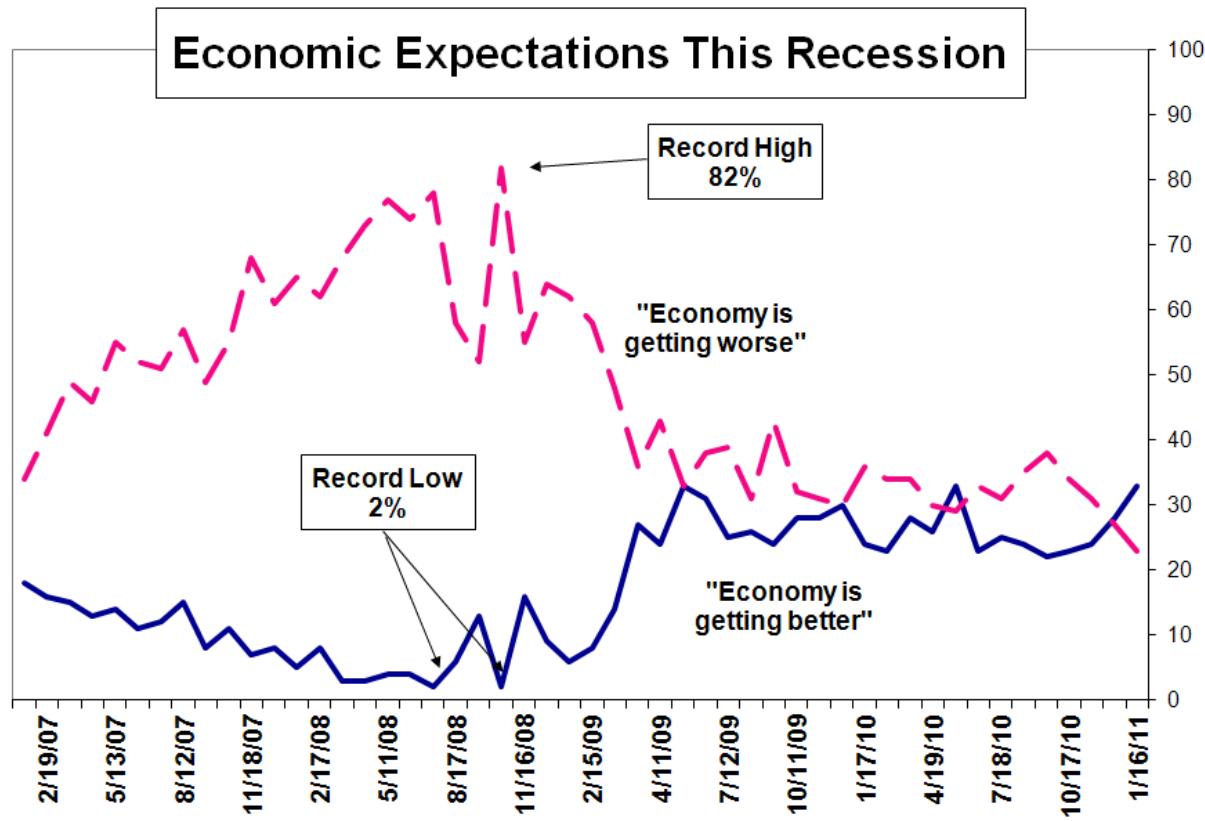

The index is derived by subtracting the negative response to each index question from the positive response to that question. The three resulting numbers are added and divided by three. The index can range from +100 (everyone positive on all three measures) to -100 (all negative on all three measures). The survey began in December 1985.

Demographic table and charts continue on next pages.
